MONTHLY WEATHER MAP

MARCH 1959

LIBRARY MAY 15 1959

General Summary of Weather Conditions

Temperatures in March 1959 were below normal in Eastern Canada, the Yukon Territories, and the Arctic, and above normal in the Prairie Provinces and the interior of British Columbia. Precipitation was above normal in the Maritime Provinces, the lower St. Lawrence River valley, southwestern Ontario, the District of Mackenzie and the coastal regions of British Columbia. On the other hand precipitation was below normal in the remainder of Quebec, most of Ontario, and the Prairie Provinces. It was a sunny month in most areas with near record amounts of sunshine for March everywhere east of the Rocky Mountains.

March 1959 was a wintry month in Newfoundland. Temperatures averaged four to five degrees below the usual March values. Precipitation was generally a little below normal in the southern part of the Island, but in the northern part of the Island and in Labrador falls were twenty to sixty per cent above the normal March amounts. A higher percentage than usual of the precipitation was in the form of snow, and snowfall amounts were generally about thirty to fifty per cent above normal.

Temperatures in the Maritime Provinces were generally below the usual for March. Deficiencies were small in Nova Scotia and Prince Edward Island, and there were even a few scattered surpluses. In New Brunswick, temperatures were everywhere below seasonal values, with deficiencies reaching a maximum in the extreme north - Campbellton and Grand Falls reporting temperatures four degrees below the March normal.

Precipitation in the Maritimes was almost everywhere above the normal March falls. Excesses ranged generally from twenty to sixty per cent. In the southern part of the region there were excesses both of rain and snow, but in northern New Brunswick, where there was little rain, the excesses were almost all in the form of snow.

March was an exceptionally windy month in the Atlantic Provinces, and Halifax, in particular, reported the windiest month in forty-three years.

Temperatures in March 1959 were below seasonal values everywhere in Quebec. Differences from normal values ranged from two degrees on Gaspe Peninsula and south of Montreal to five degrees near Lake St.John and to eight degrees at Knob Lake.

Precipitation in Quebec in March was above normal in the Lower St. Lawrence Region, from the Saguenay eastward. Surpluses were twenty to sixty per cent along the north shore of the St. Lawrence River and the Gulf of St. Lawrence and from forty to over a hundred per cent to the south of the river. There were scattered small surpluses of twenty to forty per cent in the southeastern corner of the Province. Elsewhere, precipitation was everywhere deficient, with falls generally averaging only about fifty to eighty per cent of the usual March values.

Temperatures in March 1959 were below seasonal values everywhere in Southern Ontario. Departures below normal were small in the southwestern corner of the province, but elsewhere averaged two to four degrees. In the eastern part of northern Ontario, temperatures were a degree or two below seasonal values. West of Port Arthur, however, temperatures averaged four to five degrees above normal.

Precipitation in Ontario in March was rather spotty with areas of moderate surpluses and deficiencies. Precipitation was a little above the March normal in most places in southwestern Ontario, but falls were below normal in the area from Toronto northward to Sudbury and from Lake Huron eastward to the Ottawa River. In this region, precipitation was generally only fifty to seventy per cent of the normal values. In the eastern part of northern Ontario precipitation varied from ten per cent above the usual values to twenty per cent below. West from Port Arthur, however, precipitation falls were generally only twenty-five to fifty per cent of those usually reported in March.

Temperatures were everywhere above normal in the Prairie Provinces in March. The only exception to this was Churchhill which reported a very small deficiency. The greatest anomalies were in the area between Regina and Edmonton, where temperatures generally ranged from twelve to fourteen degrees above the seasonal values.

March precipitation in the Prairie Provinces was considerably below normal in the southern part, and above normal to the north. Falls in the southern part were generally only twenty to fifty per cent of the usual March amounts. In northern Manitoba, there were surpluses of seventy to eighty per cent. There were surpluses also along the Peace River and near Lake Athabasca, falls averaging about twenty-five per cent above normal.

Temperatures in the interior of British Columbia were generally from three to five degrees above normal. A small area along the International Boundary had temperatures slightly below the seasonal values. There were a few small deficiencies also on Vancouver Island. In general, coastal areas reported temperatures very close to seasonal values.

Precipitation in British Columbia was excessive in lower Fraser River regions, on Vancouver Island, and along the Pacific Coast. Surpluses averaged generally forty to ninety per cent,although a few stations reported more than twice the usual March values. There were small excesses also around the Arrow Lakes, near Shuswap Lake and along the upper part of the Thompson River Valley. Near Lake Okanagan and along the upper Fraser River Valley, however, falls were only about fifty to ninety per cent of the normal March amounts.

Temperatures were below seasonal values in the Yukon Territory, with Whitehorse reporting a mean temperature eight degrees below normal for March.

Precipitation in the Yukon Territory in March was on the average about twenty-five per cent above normal.

March temperatures were below normal almost everywhere in the Northwest Territories. An exception was the area to the south of Great Slave Lake where temperatures were four to six degrees above the usual values. Ennadai also reported a mean temperature three degrees above normal. Elsewhere in the Districts of Mackenzie, Keewatin and Franklin temperatures ranged from five to seven degrees below the usual March values. The extreme north, however, showed temperatures near normal, and Alert had a mean temperature slightly above normal.

Precipitation was well above the usual March falls along the Mackenzie River and around Great Slave Lake. Along the Mackenzie Valley surpluses were generally from twenty to seventy per cent. At Fort Simpson, however, and along the north shore of Great Slave Lake surpluses were larger Yellowknife reported almost three inches of precipitation, which is more than three times the normal March fall. In the Districts of Keewatin and Franklin, however, precipitation was everywhere below normal, with falls only twenty to fifty per cent of the usual amounts.

MARCH 1959
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
